

## Getting Started in Autodesk Green Building Studio:

Go to: [gbs.autodesk.com](https://gbs.autodesk.com)

Sign in using the links on the left hand side of the page

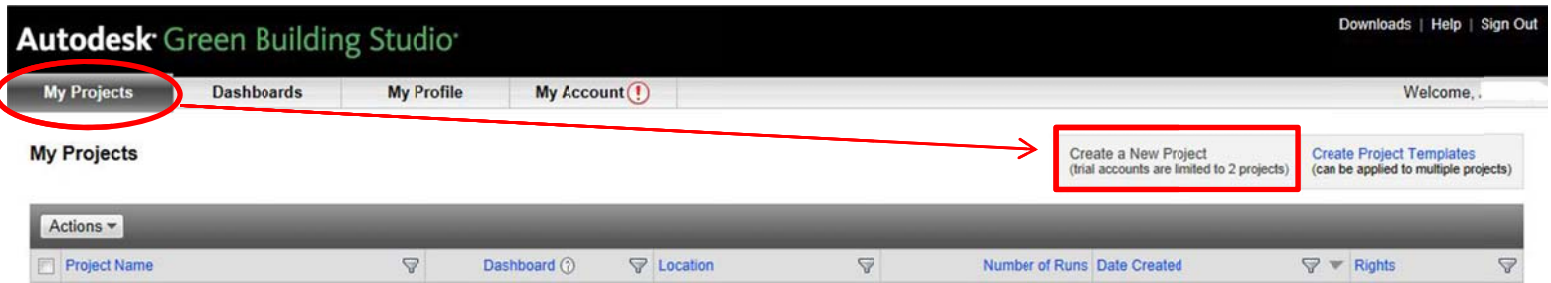

**Note:** Your normal Autodesk/student username and password will not work. You have to make one specific to Green Building Studio. If you have not done so, click Register

Once you have logged into the GBS you will come to your main GBS “home screen”

Across the top you will see 4 tabs:

**My Projects    Dashboards    My Profile    My Account**

- In **My Projects** you can create, store, and organize the information associated with multiple buildings or projects
- **Dashboards** is the tab that will store and display all of the pertinent energy calculations and information specific to an individual project.

Getting Started:

In the **My Projects** tab click on the link in gray box on the top right of the webpage that says **Create New Project**

Here you will enter:

- Project Name
- Building Type
- Schedule (Hours of Operation)
- Project Type

**Note:** You can also enter any Project notes specific to that project; this may come in handy if you are trying to distinguish it from multiple projects you have linked to your account.

Once you have filled out all the necessary information; Click **Continue**

Next Enter the project location: This will be used to determine climate factors specific to that area in addition to the estimation of energy costs for said area. When finished, click **Continue**

The Next screen you will come to will be a Terms of Use page. You can click to read the Terms of Use agreement. If you do not have authorization to share project data with GBS, it will not let you create a new project. If you agree with the Terms of Use, you may click the **Create Project** button and continue
